

Energy Compacts Metrics Dashboard — User Guide

A step-by-step guide for uploading data, exploring the dashboard, and exporting ready-to-publish HTML files.

The dashboard is a single self-contained HTML file. There is nothing to install — just double-click it to open in your browser, upload your data, and start exploring.

Getting Started

The Energy Compacts Metrics Dashboard runs entirely in your web browser. All data processing happens locally; nothing is sent to any server.

How It Works

Step 1 — Upload your data file. Drag and drop a CSV or Excel (`.xlsx`) file onto the upload area, or click to browse. The opening page is titled **Energy Compacts Metrics Dashboard**.

Step 2 — Pick the date your data was last updated. This date appears in the dashboard header (for example "Updated 18 May 2026"). Required before launch.

Step 3 — Launch. Click the **Launch Dashboard** button to enter the interactive dashboard.

Step 4 — Export. Click the green ⬇ **Export HTML** button to download a standalone file you can publish to any website.

💡 All data processing happens in your browser. Your data is never sent to any server.

Dashboard Layout

The dashboard is titled **Energy Compacts Metrics Dashboard** and organized into three main sections.

V1: UN Energy Website Theme

A light theme with orange accents.

V2: SEforAll Website Theme

A dark navy theme with amber accents. Identical layout to V1.

Both themes share the same layout:

- **SDG 7 Metrics** (right of the map): SDG 7.1.1, 7.1.2, 7.2, and 7.3.
- **Geographic Distribution** (left): interactive world map — click any region to filter.
- **Other Metrics** (below): Finance (first), GHG Emissions Averted, Green Jobs, Training, Clean Transport, Charging Infrastructure, Partnerships, and Net Zero.

Switching Themes

Toggle between V1 and V2 using the toolbar in the bottom-right corner. Exported files are named according to the selected theme.

Preparing Your Data File

Your data file (CSV or Excel) needs a specific column layout. The tool reads the header row to identify columns automatically — exact column order does not matter, and extra columns are

safely ignored.

Column Layout Overview

- **Column A — Compact Name.** The name or registry identifier for each compact. Required; rows with empty names are skipped.
- **Columns C–L — Proponent Types** (one-hot encoded). Each proponent type gets its own column whose header starts with **Proponent Type ...** . Cell values use one-hot encoding (**Y** = belongs to that type). A single compact can belong to multiple types.
- **Columns M–X — Metric Values.** Numeric columns for each SDG indicator. Matched by keywords in the header — see the mapping below.
- **Columns Y–AB — Coverage Regions** (one-hot encoded). Header must start with **Coverage Region ...** . The four base regions (Americas, Europe, Asia-Pacific, Africa) are recognized by the map.
- **Columns AC–AL — Per-Metric Target Years.** Each metric (or group of related metrics) has its own target-year column whose header starts with **Target Year ...** .
- **Column AM — Origin Country.** The country where the compact originates. Populates the Origin Country filter and triggers map highlighting.
- **Column AN — Notes.** Free-text column kept in the parsed data but not displayed on the dashboard or used for filtering.

Metric Keyword Mapping

The tool matches column headers to metrics by keyword (case-insensitive). Add or remove columns freely — only the keyword needs to be present.

Header keyword	Metric
finance committed	Finance Committed (USD)
SDG7.1.1 or electricity connection	Electricity Connections (Million people)
SDG7.1.2 or clean cooking	Clean Cooking Access (Million people)
SDG7.2 or renewable capacity	Renewable Capacity (GW)
SDG7.3 or energy savings	Energy Savings (GWh)
green jobs created	Green Jobs Created
jobs training or people trained	Green Jobs Training
buses or vehicles or trains	Clean Transport Vehicles
charging or refueling	Charging & Refueling Infrastructure
GHG or SDG13	GHG Emissions Averted (Million Tonnes)
partnerships or SDG17	Partnerships for Goals
net zero	Net Zero Pledge

Filters

The dashboard provides four filters that work together.

Proponent Type

Multi-select dropdown with checkboxes. Shows compacts belonging to at least one selected type. When none are selected, all compacts are shown.

Coverage Region

Multi-select dropdown with five options:

- **Global** — only compacts marked as yes across all four base regions.
- **Americas, Europe, Asia-Pacific, Africa** — compacts covering that region.

Selecting a region highlights it on the map; clicking a region on the map toggles the same filter. Multiple regions combine with OR logic.

Origin Country

A dropdown listing all unique origin countries found in your data. Selecting one filters compacts to that country and automatically highlights its region on the map.

The country-to-region lookup is comprehensive — it covers all UN member states plus common alternative spellings (**USA** / **United States of America** , **UK** / **Britain** , **Türkiye** / **Turkey** , **Côte d'Ivoire** / **Ivory Coast** , **Cabo Verde** / **Cape Verde** , **Eswatini** / **Swaziland** , **Myanmar** / **Burma** , **Czechia** / **Czech Republic** , **DR Congo** / **Democratic Republic of the Congo** , and many more). If you add a row with a country that is not in the static table, the dashboard falls back to inspecting that row's own Coverage Region columns: if exactly one of the four base regions is marked **Y** , the map will still highlight correctly.

Target Year

A dropdown with options **All** , **≤ 2030** , **≤ 2040** , **≤ 2050** , **≤ 2060**.

Target Year Dropdown — Per-Metric Filtering

Target Year: **≤ 2040** ▼

All

≤ 2030

≤ 2040

This filter is applied at the **metric level**, not the compact level:

- The compact count reflects proponent type, region, and country filters only.
- For each metric total, only contributions from compacts whose target year **for that specific metric** is ≤ the selected value are summed.
- **All** includes everything regardless of target year.

Accepted Input Values

One-Hot Columns

Case-insensitive. The following values count as "yes": **Y** , **y** , **Yes** , **yes** , **YES** , **1** , **true** . Anything else is treated as "no".

Accepted Values for One-Hot Columns

✓ Counted as Yes

Y
y
Yes
yes
YES
1
true
TRUE

✗ Counted as No

0
(empty)
N
No
n
FALSE
anything else

The parser also handles **compound entries**. For any one-hot column (Proponent Types, Coverage Regions, Net Zero), the first alphanumeric token of the cell is extracted and checked against the yes-vocabulary above. This makes the following recognized as "yes":

Cell value	Recognized as
Yes	yes
Yes, 2050	yes
Yes – 2040	yes
Y, 2030	yes
1	yes
true	yes
No, never	no
yesterday	no
empty / N / 0	no

This is most useful for the **Net Zero Pledge** column, where the source data sometimes embeds the target year inline (Yes, 2050). The year inside such a compound is **not** captured by the Net

Zero column itself — the compact's net-zero target year still comes from the **Target Year Net Zero Pledge** column.

Numbers

What You Type	What the Tool Reads	Notes
1000000	1,000,000	Plain digits
1,000,000	1,000,000	Comma-separated thousands
1.5E+09	1,500,000,000	Scientific notation
(empty)	0	Treated as zero
- or -	0	Treated as zero
N/A	0	Treated as zero

What Adapts vs What Is Fixed

Adapts to Your Data

Feature	Behavior
Proponent Types	Discovered from column headers starting with Proponent Type ...
Coverage Regions	Discovered from headers starting with Coverage Region ...
Origin Countries	Discovered from the Origin Country column
Compact count	Counted from non-empty rows
Metric values	Parsed per row with automatic number-format handling
Target years	Parsed per metric
Data date	Entered by the user via the calendar picker

Fixed (Hardcoded)

Feature	Behavior
Metric definitions	The 12 SDG metrics (finance, electricity, cooking, etc.) are fixed
Map regions	Americas, Europe, Asia-Pacific, Africa
Target Year options	All / ≤ 2030 / ≤ 2040 / ≤ 2050 / ≤ 2060
Country $\rightarrow$ region map	Comprehensive UN-member-state lookup with data-driven fallback
Global filter	Requires all four base regions marked as "yes"
Visual design	Fonts, color schemes, and layout are fixed

Exporting for Your Website

Click  **Export HTML** to download a standalone file with the following properties:

- Data embedded directly — no upload step needed when opening.
- Single `.html` file — no other files required.
- Current theme applied — V1 (UN Energy) or V2 (SEforAll).
- Works anywhere — web server, CMS, static host, or locally.

 Try Netlify Drop (app.netlify.com/drop) for instant live hosting — just drag and drop your exported file.

Frequently Asked Questions

What if I add a new proponent type or country? Filters update automatically from your data. New countries are mapped to their region either through the comprehensive built-in table or by inspecting the row's own Coverage Region columns.

What browsers are supported? Chrome, Firefox, Safari, or Edge.

Is my data secure? Yes — everything runs locally in your browser. No data is sent to any server.
